

Building Assessments

Quizzes, keys, and study guides from your notes

Assessment in the AI Era

- Take-home work is no longer a reliable signal
- In-person, written-response quizzes move the signal back in the room
- One handwritten page of notes, no devices

every ~3 weeks:

in-person quiz

written responses

1 page handwritten notes

no laptops, no phones

The Quiz Pipeline

- One prompt produces the quiz, the answer key, and the study guide
- Each lands as markdown, then a print-ready PDF
- Format rules live in CLAUDE.md

```
meta/quizzes/spring-2026/quiz3/
```

```
3_memory_quiz.md
```

```
3_memory_quiz.pdf
```

```
3_memory_answer_key.md
```

```
3_memory_answer_key.pdf
```

```
3_memory_study_guide.md
```

```
3_memory_study_guide.pdf
```

From Notes to Quiz

- The agent builds questions from the lecture notes you taught
- Questions track the material, so prep is the study guide
- You edit wording and difficulty before it prints

```
> generate quiz 3 from the  
memory and pointers lectures,  
5 questions, follow the quiz  
rules in CLAUDE.md
```

Answer Keys and Rubrics

- The key carries a grading rubric for the TA
- Points are fixed; partial-credit guidance is spelled out
- Grading stays consistent across graders

Q3: Stack vs Heap

Stack: automatic, LIFO, freed on return. Heap: manual, malloc/free.

Grading: 10 full. 7 if lifetime is vague. 5 for any real effort.

Study Guides

- A short list of topics, no answers given away
- Students get it ahead of the quiz
- Same source notes, different view

Quiz 3 Study Guide

- * Stack frames and lifetime
- * Heap allocation with malloc
- * Pointer arithmetic
- * Dangling pointers

Print-Ready PDFs

- `\newpage` after each question leaves room to write
- pandoc turns the markdown into a printable PDF
- No styling fuss -- the questions are the point

```
pandoc 3_memory_quiz.md \  
-o 3_memory_quiz.pdf
```

The Lecture Review Loop

- After lecture, download the recording transcript
- `/review-lecture` compares the transcript to the slides
- Output: timing, coverage gaps, and proposed slide fixes

```
deliver -> transcript
transcript + slides
         -> /review-lecture
         -> gaps + fixes
         -> revise slides
```

Generating Assignments

- Draft assignment specs and starter code from a description
- The agent can build a sample system you stub out for students
- You own the spec; it handles the boilerplate

```
> write an assignment spec for  
  a malloc implementation, plus  
  a test skeleton students fill  
  in
```

DEMO: Notes to Quiz

- Generate a quiz and answer key from one lecture's notes
- Show the rubric the TA will grade against
- Render the PDF and show the per-question page breaks

Summary

- Take-home work is a weak signal; in-person written quizzes are stronger
- One prompt yields the quiz, the answer key, and the study guide
- Questions are built from the notes you actually taught
- Answer keys carry a rubric so grading stays consistent
- Study guides hint at topics without giving away answers
- `\newpage` and pandoc produce print-ready quizzes
- `/review-lecture` checks the recording against your slides
- The agent can draft assignment specs and starter code
