

Authoring in Markdown

Course materials the agent can read

Plain Text Is the Substrate

- Lectures, quizzes, and notes are all markdown in the repo
- Plain text diffs, versions, and edits cleanly
- The agent reads it directly -- no copy-paste, no export

```
meta/lectures/  
  01_introduction.md  
  02_transistors.md  
  ...  
  36_final_review.md  
meta/quizzes/  
meta/lectures/notes/
```

Why Agents Like Plain Text

- No binary format to parse or round-trip
- Every change is a readable line-level diff
- The same file feeds the slides, the PDF, and the agent

```
.md -> slidev -> slides
```

```
.md -> pandoc -> PDF
```

```
.md -> agent -> edits
```

Slides Are Markdown

- Slidev turns markdown into a slide deck
- One file per lecture, one slide per `---`
- Concepts on the left, code or diagrams on the right

```
## Dennis Ritchie's Insight
```

- * Ritchie designed C as portable assembly
- * Enough abstraction to leave one machine
- * Little enough to still see the hardware

```
::right::
```

```
![book] (./public/366/c_book.png)
```

Encode Style Once

- The slide rules live in CLAUDE.md, not in your head each time
- The agent applies them to every deck it touches
- Change the rule once and regenerate

- * Concepts left, code/media right
- * Max three bullets per slide
- * No filler slides (no "Pitfalls")
- * Cover slide first, summary slide last
- * Relative image paths: ./public/...

Generating a Deck

- Give a topic and an outline, get a first-draft deck
- It follows your layout, bullet limits, and frontmatter
- First draft is a starting point, not the final cut

```
> draft a lecture on linkers,  
follow the lecture rules in  
CLAUDE.md, 12 slides
```

```
-> 20_linkers.md  
cover + 10 + summary + end
```

Revising Slides

- Point at a slide and say what is wrong
- The agent edits that slide, leaves the rest alone
- Small, targeted edits stay reviewable

```
> slide 4 has five bullets,  
   cut it to three and move the  
   code example to the right
```

```
> tighten the summary to  
   eight bullets
```

Curriculum Gap Analysis

- Hand the agent your lectures and a peer syllabus
- Ask what topics you cover that they do not, and the reverse
- Output is a list to judge, not a mandate to follow

```
> compare meta/lectures to this  
syllabus, list topics we are  
missing and topics we cover  
that they skip
```

DEMO: Topic to Deck

- Generate a short deck from a single-line topic
- Show that it honors the CLAUDE.md rules without restating them
- Fix two slides live and watch the diff

Summary

- Course materials are markdown in the repo, not binary files
- Plain text versions, diffs, and edits cleanly
- The same file feeds slidev, pandoc, and the agent
- Slidev decks are one file per lecture, one slide per ---
- CLAUDE.md holds the style rules so output is consistent
- Generated decks are first drafts you revise, not final cuts
- Targeted edits to one slide stay easy to review
- The agent can compare your curriculum to a peer syllabus
